

What are Butt Weld Fittings? - Butt Weld Fittings are a family of fittings used in connecting and creating pipe-work systems whereby they are welded into the system using circumferential butt welds. They are used only in conjunction with ANSI Pipe and are available in the same size range. They are used in areas where pipe-work is permanent and are designed to provide good flow characteristics.

What manufacturing standard is required and is the fitting seamless or welded?

Wrought pipe fittings are manufactured to dimensions and tolerances in ANSI B16.9 with the exception of short radius elbows and return bends which are made to ANSI B16.28. Light-weight corrosion resistant fittings are made to MSS SP43.

Butt Weld Fittings are available to ASTM A403, ASTM A815 and MSS SP43. These standards require the fittings to be manufactured as follows:

Seamless austenitic fittings are made from seamless pipe to ASTM A312.

Welded fittings in austenitic grades are manufactured from welded pipe to ASTM A312 or plate to ASTM A240. Note that welded fittings manufactured from plate may have two welds.

Duplex (ferritic/austenitic) grades are manufactured from pipe to ASTM A790 or plate to ASTM A240.

ASTM A403/A815 Butt Weld Fittings are sub-divided into four classes:

WP-S: Made from seamless pipe to ASTM A312 (Austenitic) or ASTM A790 (Duplex).

WP-W: Manufactured from welded pipe to ASTM A312 (Austenitic) or ASTM A790 (Duplex). There is no requirement for radiography unless a manufacturer's weld has been introduced or there are welds made with the addition of filler metal.

WP-WX: Of welded construction. All welds must be 100% radiographed in accordance with Paragraph UW-51 of Section VIII, Division 1 of the ASME Boiler and Pressure Vessel Code.

WP-WU: Of welded construction. All welds must be 100% examined ultrasonically in accordance with Paragraph UW-51 of Section VIII, Division 1 of the ASME Boiler and Pressure Vessel Code. Note that this Class only applies to austenitic fittings made to ASTM A403.

CR Fittings are manufactured to the requirements of

MSS SP43. These are light-weight fittings and do not require radiography.

Notes:

WP: Means Wrought Pipe

CR: Means Corrosion Resistant

What markings will be on the fittings? - The full identification of the fitting should be marked on it including:

Nominal Pipe Size (Nominal Bore)

Schedule (Wall Thickness)

Specification

Grade

Method of Manufacture (Seamless or Welded)

Heat Number

Manufacturer's Name or Symbol

REVISION HISTORY

Datasheet Updated 18 July 2019

DISCLAIMER

This Data is indicative only and as such is not to be relied upon in place of the full specification. In particular, mechanical property requirements vary widely with temper, product and product dimensions. All information is based on our present knowledge and is given in good faith. No liability will be accepted by the Company in respect of any action taken by any third party in reliance thereon.

Please note that the 'Datasheet Update' date shown above is no guarantee of accuracy or whether the datasheet is up to date.

The information provided in this datasheet has been drawn from various recognised sources, including EN Standards, recognised industry references (printed & online) and manufacturers' data. No guarantee is given that the information is from the latest issue of those sources or about the accuracy of those sources.

Material supplied by the Company may vary significantly from this data, but will conform to all relevant and applicable standards.

As the products detailed may be used for a wide variety of purposes and as the Company has no control over their use; the Company specifically excludes all conditions or warranties expressed or implied by statute or otherwise as to dimensions, properties and/or fitness for any particular purpose, whether expressed or implied.

Advice given by the Company to any third party is given for that party's assistance only and without liability on the part of the Company. All transactions are subject to the Company's current Conditions of Sale. The extent of the Company's liabilities to any customer is clearly set out in those Conditions; a copy of which is available on request.

Butt Weld Fittings

Introduction

Butt Weld Fittings are a family of fittings used for forming circumferential butt weld joints in pipework systems.

They are used only in conjunction with ANSI Pipe and are available in the same size range. They are used in areas where pipe-work is permanent and are designed to provide good flow characteristics.

Manufacture

- **Materials.** Refer to chemical composition table ASTM A240 on page 1-6. Fittings may be made from forgings, bars, plates, or seamless or welded tubular products, provided the materials conform to the chemical composition table.
- **The steel** may be melted by electric-furnace, or vacuum-furnace, or by either of these followed by vacuum or electroslag-consumable remelting.
- **Forming.** Fittings may be formed by hammering, pressing, piercing, extruding, upsetting, rolling, bending, fusion welding, machining or any combination of these processes.
- **Heat Treatment.** All fittings are heat treated in accordance with the heat treatment table. All welding must be done prior to heat treatment.

Manufacturing standards

Wrought pipe fittings are manufactured to dimensions and tolerances in ANSI B16.9 with the exception of short radius elbows and return bends which are made to ANSI B16.28. Light-weight corrosion resistant fittings are made to MSS SP43.

Butt Weld Fittings are available to ASTM A403, ASTM A815 and MSS SP43. These standards require the fittings to be manufactured as follows:

- Seamless austenitic fittings are made from seamless pipe to ASTM A312.
- Welded fittings in austenitic grades are manufactured from welded pipe to ASTM A312 or plate to ASTM A240. Note that welded fittings manufactured from plate may have two-welds.
- Duplex (ferritic/austenitic) grades are manufactured from pipe to ASTM A790 or plate to ASTM A240.

ASTM A403/A815 Butt Weld Fittings are sub-divided into four classes:

- **WP-S:** Made from seamless pipe to ASTM A312 (Austenitic) or ASTM A790 (Duplex).
- **WP-W:** Manufactured from welded pipe to ASTM A312 (Austenitic) or ASTM A790 (Duplex). There is no requirement for radiography unless a manufacturer's weld has been introduced or there are welds made with the addition of filler metal.
- **WP-WX:** Of welded construction. All welds must be 100% radiographed in accordance with Paragraph UW-51 of Section VIII, Division 1 of the ASME Boiler and Pressure Vessel Code.
- **WP-WU:** Of welded construction. All welds must be 100% examined ultrasonically in accordance with Paragraph UW-51 of Section VIII, Division 1 of the ASME Boiler and Pressure Vessel Code. Note that this Class only applies to austenitic fittings made to ASTM A403.

CR Fittings are manufactured to the requirements of MSS SP43. These are light-weight fittings and do not require radiography.

Notes:
WP: Means Wrought Pipe
CR: Means Corrosion Resistant

Markings on tube and fittings

The full identification of the fitting should be marked on it including:

- Nominal Pipe Size (Nominal Bore)
- Schedule (Wall Thickness)
- Specification
- Grade
- Method of Manufacture (Seamless or Welded)
- Heat Number
- Manufacturer's Name or Symbol

Notes

- For run size NPS 14 and larger, outlet dimension B is recommended but not required.
- Dimensions quoted in mm are 'Nominal' values from B16.9 (i.e. rounded equivalents of the inch dimensions). Refer to B16.9 for additional 'Max' and 'Min' metric dimensions.
- The run and outlet NPS sizes are as shown in the left hand column. The corresponding size designation for a reducing tee is, for example, for the tee shown as 4↔3: 4 x 4 x 3, and for the tee shown as 44↔36: 44 x 44 x 36.
- For tolerances see page 3-14.
- ¹ Weights are approximate and based on manufacturers' data (where available) for Schedule 40S/Standard fittings. See page 3-15 for further information.

Notes

- Dimensions quoted in mm are 'Nominal' values from B16.9 (rounded equivalents of the inch dimensions). Refer to B16.9 for additional 'Max' and 'Min' metric dimensions.
- OD of barrel max and min dimensions (in and mm) are rounded. Refer to B16.9 for the exact values.
- Long pattern stub ends are standard. Purchaser should specify if short pattern is required.
- Long pattern stub ends are also known as ASA Stub Ends.
- Short pattern stub ends are used with larger flanges in Classes 300 and 600, and with most sizes in Class 900 and higher.
- When long pattern stub ends are used with flanges in Classes 1500 and 2500, it may be necessary to increase the length A.
- Additional lap thickness must be provided for special facings (e.g. tongue and groove); this is within length A.
- Dimension B conforms to ASME/ANSI B16.5, Pipe Flanges and Forged Fittings.
- Gasket face finish shall be accordance with ASME/ANSI B16.5 for raised face flanges.
- For tolerances see page 3-14.
- ¹ Long pattern weights are listed (short pattern weights are similar to MSS SP-43 lap joint stub ends, page 3-11). Weights are approximate and based on manufacturers' data (where available) for Schedule 40S/Standard fittings. See page 3-15 for further information.

Butt Weld Fittings

Range/Sizes - Lap Joint Stub Ends - MSS SP-43

Butt Weld Fittings - Range/Sizes - Lap Joint Stub Ends - MSS SP-43

Note:
Type A is shown.
Type B has a square
corner, as indicated by the
maximum dimension R in
the table below.

Dimensions (based on MSS SP-43) and example weights

Nominal Pipe Size	Common		Length		Diameter of Lap		Radius of Fillet				Weight

24	24.00	610	6.00	152	27.25	692	0.50	12.70	0.06	1.52	25.65

Notes

- Dimensions quoted in mm are equivalents of the inch dimensions (i.e. 25.4 x in).
- Metric dimensions are not specified in MSS SP-43.
- Length A and Radius R are applicable for Schedule 40S or thinner.
- Contact faces of stub ends shall have a modified spiral or concentric serration.
- For tolerances see page 3-14.
- ¹ Weights are approximate and based on manufacturers' data (where available) for Schedule 40S/Standard fittings. See page 3-15 for further information.

Butt Weld Fittings

Specifications - ASTM A403

Finish and repair

- **Surface discontinuities** deeper than 5% of nominal wall thickness to be removed.
- **Defect removal by grinding or machining.** The following are removed:
 - Surface discontinuity as above.
 - Surface checks (fishscale) deeper than $\frac{1}{64}$ in (0.4mm).
 - Mechanical marks deeper than $\frac{1}{16}$ in (1.6mm).
 - When removal reduces wall thickness below 87½% of nominal, the fitting is rejected or repaired.
- **Defect repair by welding**
 - Permitted for fitting made to specifications.
 - Purchaser agreement is necessary for weld repair of special fitting.
 - Repair is limited to 10% of outside surface and 33½% of nominal wall thickness.
 - All weld repairs are examined using liquid penetration test.
 - There should be no cracks in prepared cavities, or in finished weld, or in the surrounding $\frac{1}{2}$ in (13mm) of base metal.

	S33228	73	500	27	185	28	20

Notes

- Grades or UNS designations are prefixed with letters 'WP' or 'CR' to indicate class.

Butt Weld Fittings

Specifications - General

Applicable specifications

Specifications applicable to butt welding fittings are as follows:

- ◆ **ASME/ANSI B16.9-2007** - Factory-made wrought steel butt welding fittings.
- ◆ **ASME/ANSI B16.28-1997** - Wrought steel butt welding short radius elbows and returns.
- ◆ **MSS SP-43 1991**, Reaffirmed 1996 - Wrought stainless steel butt welding fittings. This applies to 5S, 10S, and 40S wall thicknesses only.
- ◆ **ASME/ANSI B16.25-1997** - Butt welding ends. This defines various weld bevel designs and dimensions, beyond the scope of this manual.
- ◆ **Wall Thicknesses.** Fittings are manufactured to match the wall thicknesses of pipe.
- ◆ **Weights** quoted in the fitting tables are based on manufacturers' data and are approximate. Actual weights may vary from those quoted depending on the type of construction. For austenitic and duplex stainless steel, multiply the quoted weight by 1.014. For ferritic and martensitic stainless steel, multiply the quoted weight by 0.985.

Manufacture and test

- ◆ **Materials and Manufacture.** ASME/ANSI and MSS stainless steel butt welding fittings are most commonly manufactured to ASTM A403.
- ◆ **Production Testing.** Test requirements are defined in ASTM A430.
- ◆ **ASME/ANSI Test Requirements.** B16.9 and B16.28 do not require production testing of fittings although they must be capable of withstanding the rated pressure:

Pressure Ratings. The rated pressure is as for straight seamless pipe of equivalent NPS, wall thickness and material.

Proof testing to qualify the fitting design comprises a bursting strength test. The fitting is required to withstand, without rupture, 105% of the pressure P given by: $P = (2St) / D$ where

S = Actual ultimate tensile strength of a specimen from a representative fitting.

t = Nominal wall thickness

D = Outside diameter

- ◆ **MSS SP-43 Test Requirements.** SP-43 does not require hydrostatic testing of fittings although they must be capable of withstanding 1.5 times the pressure ratings at 100 °F:
Pressure Ratings. Fittings produced to MSS SP-43 have the pressure ratings shown in this table.

Temperature	Schedule 5S	Schedule 10S
°F	Pressure, psi	
100	225	275
150	215	255
200	200	240
250	190	225
300	175	210
350	165	195
400	150	180
450	Not recommended for use at these temperatures	165
500		150
600		130
700		110
750		100

Butt Weld Fittings

Weights

Buttweld fitting weights

As mentioned previously, the ANSI/ASME and MSS buttweld fitting specifications do not specify wall thicknesses and weights for fittings. Weights quoted in the dimension and weight tables are therefore based on manufacturers' information and should be considered as approximate and provided as a guide only (fitting weights can vary considerably between manufacturers due to differences in construction). The example weights quoted are for 40S or Standard (STD) wall thicknesses only. It is possible to calculate the approximate weight at any other wall thicknesses using the factors provided in the table below. These factors are calculated from the ANSI/ASME B36.19M and B36.10M pipe weights and are based on the proportional relationship of the pipe weights (kg/m) to the weights of 40S and STD wall thickness pipe at each NPS.

ASME/ANSI pipe sizes and weight multiplication factors for use in obtaining approximate fitting weights.
For use with the example (40S/STD) weights provided in the ANSI/ASME tables of this section.

NPS	Multiplication Factors = Proportional relationship of pipe weights to 40S or STD pipe at each NPS! Multiply the example 40S/STD fitting weights (at the required NPS) by the factors below (at the same NPS) to give approximate weights at different wall thicknesses.

Notes

1 The relationship between pipe weights at each NPS can strictly only be applied to fittings where the same proportional relationship is maintained in the fitting. Less accurate results will therefore be obtained for reducing tees, for example, than for elbows, equal tees, etc. The type of fitting construction may also make the factors inaccurate.
